Allowable Subject Matter

Claims 3 and 6 are allowed over the prior art.

The following is an examiner's statement of reasons for allowance:

Prior art discloses a cylindrical commutator having a plurality of mutually insulated segments that are arranged at equal intervals on the external periphery of a cylindrical surface and each of the segments include a hook for the line connection extending from one end thereof a groove formed on an inner surface thereof and a pair of anchors on both sides of the groove extending over substantially the total length of the segments. However, prior art does not disclose a pair of anchors being connected with each other at the end of the groove on the side near the hooks and slanted to the groove at the other end of the groove, in which a mold resin for fixing the segments in a cylindrical shape and that the anchors are being embedded therein and undercuts are formed on the mold resin for separating the segments.
